

# Voice Control For an OS

---

By

Anandita Tiwari - 211ME309

Nancy Kumari - 211CS143

Anchal Kumari - 211CS105

# Introduction

---

- A voice control which works like an OS
- Can handle many tasks which an OS will
- Can handle some tasks which a voice assistant can't
- Sounds like Human but works like a machine

# Functions that it can handle

---

- **Folders / Directories:**
  - Create, Delete, Open
  - Change, Go Back, Rename
  - List directories, files
- **Files:**
  - Create, Open, Delete, Edit, Run, Rename
- **Search:**
  - Google, Wikipedia, Youtube

```
Hi rishi, I am your personal desktop assistant
How can I help you?
Response is: show folders
functions.py, pics, run_app.py, sdf.py, setup.py, __pycache__, None
How can I help you?
Response is: go back
How can I help you?
Response is: show folders
ACD, Code, DBMS, DSA, Mic lecs, os, osproj, seminar, som, Web, webproj, None
Ok bye and take care
```

# Continuation

---

- Shut down in \_\_ minutes
- Close all apps
- Tell the Time
- ★ **Fill a form:**
  - Input a url in UI
  - Fill form by Voice control
  - Exit

```
Hi rishi, I am your personal desktop assistant  
How can I help you?  
Response is: what is the time  
the time is 01:01:33
```

# Work Done

---

## ★ Voice Control:

- Made “functions.py” which has shell commands for each operation that we were planning to do
- Made “voice.py” which basically calls the functions in “functions.py” based on the voice commands given by the user

## ★ Form Filling:

- Made a UI which appears when user asks for “Form filling” which asks the URL of the form, it redirects to that URL & user can fill the form by his/her voice.

# Methodology

---

- Voice control
  - Shell commands are written in separate file which will be imported & appropriate function will be called when needed.
  - talk() function will ask the user for command, it will convert into text & it will pass it to check for required function.
  - respond() function is used to reply the user about his/her commands
  - Form filling basically involves checking for all the fields having <input> tag in the html (except for passwords).
- Tech stack: os, selenium, tkinter, gTTs libraries are used

# Error handling

---

- In case user's voice is not recognisable properly, after trying 2 times, it asks for user to type his command.
- Form filling
  - If input type is email then appropriate replace commands are written to replace it with "@"
  - Due to privacy issues, if input type is password, then voice input is not accepted.
- Only lowercase letters are considered to remove the ambiguity since a voice doesn't know capital or small.
- Can run only Python, C, C++ files.

# Results

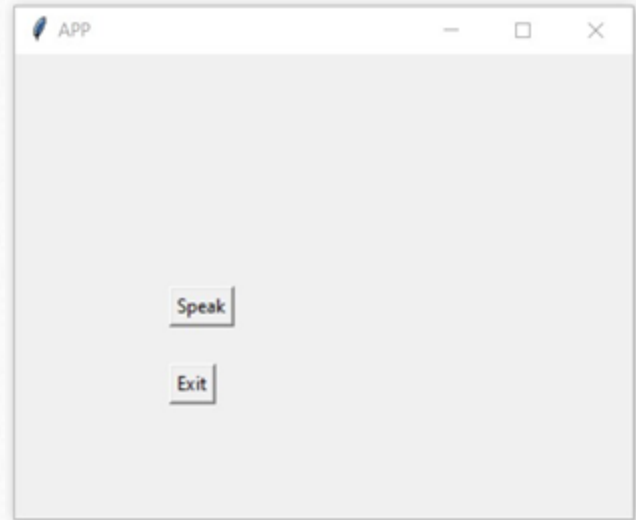

---

**It opens a console where the conversation of the user will be printed.**

**It opens a UI where user has to select “Speak” or “Exit”**

**If user has no query after one or two tasks, he can click “Exit”**

Hi rishi, I am your personal desktop assistant

**Incase the voice control is unable to understand the user even after 2 times, it asks for user to type his request**

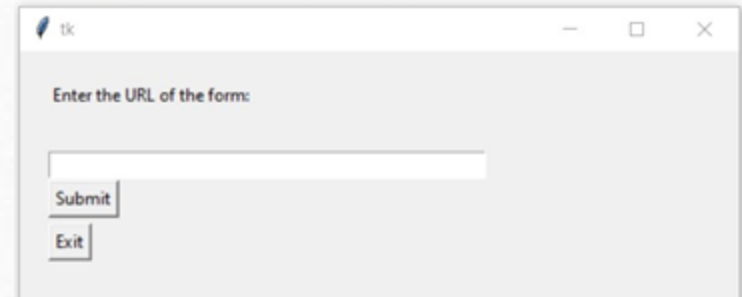

```
Sorry, I can't get you. Please type your command
Please type your command: wikipedia about operating systems
Searching Wikipedia
According to Wikipedia
An operating system (OS) is system software that manages computer hardware, software resources, and provides common services for computer programs.
Time-sharing operating systems schedule tasks for efficient use of the system and may also include accounting software for cost allocation of processor time, mass storage, printing, and other resources.
For hardware functions such as input and output and memory allocation, the operating system acts as an intermediary between programs and the computer hardware, although the application code is usually executed directly by the hardware and frequently makes system calls to an OS function or is interrupted by it.
```

### **Searching in Wikipedia & Reporting the answer**

### **Filling a form by Voice**

**URL of the form must be pasted here & click Submit**

```
Hi rishi, I am your personal desktop assistant
How can I help you?
Response is: I want to fill a form
```

The screenshot shows a standard Tkinter window titled 'tk'. Inside the window, there is a text label 'Enter the URL of the form:' followed by a single-line text input field. Below the input field, there are two buttons: 'Submit' and 'Exit', each on its own line.

After clicking submit, a new window opens like this where user can fill the form
